

The Mint

1.-Scientific name

genus *Mentha*

2.-Characteristics of the plant

- 1.-It can be found in many parts of the world such as North America, southern Africa and Australia.
- 2.-This plant is so tasty that it is usually used as a flavoring for foods.
- 3.-This plant is neither toxic nor smelly so you can enjoy smelling it as long as you want.
- 4.-You can either grow this plant to 30 cm or to 90 cm everything depends on the way you take care of it.
- 5.-Mint can be recognized either by its particular shape or by particularly its aromatic smell.

3.-Kind of irrigation

The water from the rains is not enough for this plant to survive therefore it will need to be irrigated very carefully.

This plant has to be irrigated between 2 or 3 times per week if you notice that the raining period is too short you should at least irrigate the plant twice per week.

4.-Care of mint

The mint is such an easy plant to take care of specially this kind of plant that grows so quickly that you won't even notice it.

Firstly you would like to select a place not too narrow to leave the plant, this special spot must be neither dark nor extremely wet.
After that all you have to do is to follow the watering process that was previously mentioned making sure that the temperature is between 15° and 20°.

4.-Manure and pruning

The good pruning is essential when taking care of this plant because of the fact that it will add a fresh environment to your house. Be careful to neither over-fertilize the plant nor leaving the plant without one.

5.-Properties of the plant

- 1.-The products made from this plant provide refreshing taste
- 2.-Antibacterial features
- 3.-Helps to indigestion issues whenever is used
- 4.-Provides A,B,C and D vitamins
- 5.-Healthy enough to cure a flu

Mint is such an useful plant? doesn't it
